OOP in Java (Lab 1)

Objective: To learn about basics of Java and creating the hello world program in Java.

Descriptions:
- See the theory in the slides that is provided in the class

Program

Note: The program should be well formatted i.e. proper use of indentation, comment, description of program and functions etc.

1. Write a program "TenHellowWorlds.java" then prints "Hello, Wrold" ten times.

2. Describe when happens if, in HelloWorld.java, you omit
- **main**
- **String**
- **HelloWorld**
- **System.out**
- **println**

3. Describe what happens if, in HelloWorld.java, you omit
- **the ;**
- **the first "**
- **the second "**
- **the first {**
- **the second {**
- **the first }**
- **the second }**

4. Run the following program and what error message you've got? Solve the problem.

```
public class Hello {

public static void main() {

    System.out.println("Doesn't execute");

  }

}
```
